

## BAX Global

Ongoing carrier compliance is one of Varsity's top priorities. Varsity works directly with customers and carriers to ensure the most timely rate updates and critical compliance changes to labels, manifests, service types, and value-added services.

### **BAX United States Domestic Carrier Compliance Kit (CCK)**

Varsity's BAX CCK is designed to support all BAX shipping requirements. BAX specific features and functionality include domestic compliance with rate and routing data. Specialized services such as Dangerous Goods, Beyond Delivery, and Pickup and Signature Service can be account specific or service type specific.

The BAX United States Domestic Compliance Kit enables full shipment capabilities for all domestic BAX shipments. The kit contains all rate, ZIP Code™, and zone data for shipments from a given ZIP Code to any location in the United States served by BAX.

BAX shipping rules and restrictions are immediately applied to ensure full shipping compliance and timely delivery of packages. Specialized labels are generated, as well as Acknowledgement of Receipt, Daily Manifest, Daily Remittance, Rating Exception, and Package Induction reports. Electronic manifests can be generated for secure FTP upload to BAX's host system.

### **Additional Zone Databases (AZD)**

Expanding your shipping operations to new locations is made easy with Varsity's AZDs. One-step import of complete rate and routing data for different originating ZIP Codes speed shipping from your new location.

### **Certification Level**

Varsity is certified for BAX's Automated Shipment Processing. This covers all rating, manifesting, and labeling functions offered by BAX .
